

Installing RealOne Player

Mac Laptop Users

OS X

Use these directions to add Real Player to your laptop. Real Player is used by certain web sites to be able to hear the sound.

1. Mount Group Shares
Click on your desktop, then press Apple/K
Select S8* server, click Connect
Enter your user name & pw, click Connect
Select Group Shares from the list, click OK
If you scroll to the far left on your Finder Window, you should now see that the
Group Shares server has been mounted on your laptop
2. Double click on Group Shares in your Finder Window
3. Scroll to the TeacherLaptopItems folder, double click to open it
4. You should see the RealOnr Player item, drag this into your Applications icon on the window bar. Let it copy to your laptop, it will take a few minutes.
5. Now go to your Applications & open Real Player
6. Now you need to go through the install steps:
on Welcome screen, click Continue
on Release Notes screen, click Continue
on License screen, click Accept
on Internet Connect screen, under BroadBand, select DDSL?Cable 384 kbps,
click Continue
on Sign in Window, click Later
7. With Real Player open, on Menu Bar † RealOne Player † Preference
Select Transport from the list on the left
On the right, check the box next to "Use specific UDP Ports ..."
Click OK
8. That's it!
